MUMBAI DABBAWALA

ABSTRACT:

This project provides a Web page application through which people of Mumbai can order Dabba service online using the internet. The main motive of this project is to have practical knowledge of Dabbawala's team and their actual performance in the supply and management of food delivery service. Now a day's readymade food is easily available but homemade food and its taste is a different matter. In our busy schedule, fresh and homemade food preparation is difficult in early mornings. However, it is made possible by Dabbawalas as they carry homemade food and deliver the same before our lunchtime. Mumbaikars can directly order a dabba for their afternoon lunch online. This application is built to be beneficial to student knowledge as well as help Mumbai dabbawala's.

Advantages

Website can be easily accessible to the customers and saves their time.

It eliminates the use of ordering through phone that causes incessant load on the workers in taking and processing orders whereas online ordering automates this process.

Customers can order online at any time of the day.

There is a confirmation of the order taken online which is sent to the user via email.

Disadvantages

One cannot cancel the order once given.
